College of Education "Improving students' access to scholarships"

Going Well:

Student applications increased by 30%; of which 62% of applicants identified with an URM group.

Project Description:

We changed how we distributed scholarship information to students and our application and selection procedures to improve students' access to College scholarship information; diversify our scholarship applicant pools; and increase equitable distribution of scholarship funds to Education students.

Challenge:

Matching scholarship and program admission timelines to enhance student recruitment.

Lesson Learned:

We can decrease barriers to College scholarships by changing how we distribute scholarship information; the application structure and procedures; and the evaluation and selection criteria.
